

KOBYGARDTM SYSTEM

- Precise, minimally invasive solution for:
 - Plantar fasciitis
 - Morton's neuroma
- Effective alternative to:
 - Nerve excision surgery
 - Endoscopic plantar fasciotomy
 - Open plantar fasciotomy
- Procedure can be performed in minor surgery settings

KOBYGARD™

KobyGard is a versatile system designed to address chronic plantar fasciitis and Morton's neuroma, two common soft tissue foot indications. Surgeons can safely isolate and create a precise predetermined cut of the transverse metatarsal ligament or plantar fascia regardless of thickness while protecting the surrounding tissue. The KobyGard System gives surgeons and patients a minimal invasive technique while providing an alternative to endoscopic or open procedures.

**Minimally Invasive
Nerve Decompression
(MIND)**

**Minimally Invasive
Plantar Fasciotomy
(MPF)**
